BACKGROUND OF THE INVENTION

1. Field of the Invention

This invention relates to polymers for use in hair and skin care compositions, and, more particularly, to conditioning and styling terpolymers having advantageous low tackiness and high humidity resistance.

2. Description of the Prior Art

where:

X is a vinyl cyclic amide, e.g. vinyl pyrrolidone; n=3 to 6; R is H or C_1-C_5 alkyl and wt% of X=40-95; preferably 60-90;

$$\begin{array}{c}

$$\begin{array}{c}

where:

Y is a derivative of acrylic acid; P is O or NR_2 ; R_1 , R_2 , R_3 , R_4 are independently H or C_1 - C_5 alkyl; R_5 is C_2 - C_{16} alkyl alkylene; and wt% of Y = 0.1 to 55; preferably 5-30;

where:

Z is a quaternized derivative of an acrylic acid; P is O or NR₂; R₁, R₂, R₃, R₄ are independently H or C₁-C₅ alkyl; R₅ is a C₂-C₁₆ alkylene; and R₆ is C₉-C₂₄ alkyl; M is a halide, tosylate or phosphate anion; and wt% of Z = 0.25 to 50, preferably 1-30.

The terpolymers of the invention are hydrophobically-modified cationic polymers having long alkyl-chains therein. A typical terpolymer thus has the following formulas:

Suitably, monomer Z is prepared by tosylating DMAPMA as follows:

$$\begin{array}{c} \text{CH}_2 = \text{CH} \\ \text{C=O} \\ \\ \text{DMAPMA} + \text{Dodecyltosylate} & \longrightarrow & \text{NH} \\ \\ & & \\ &$$

In preferred embodiments of the invention,

X is vinyl pyrrolidone;

Y is dimethylaminopropyl methacrylamide, and

Z is a $C_{12}-C_{18}$ alkyl quaternized derivative of an acrylic acid;

X is about 60-90 wt%, Y is about 5-30 wt% and Z is about 1-30 wt%; Z is C_{12} alkyl quaternized monomer; the weight average molecular weight of the terpolymer is 200,000 to 2,000,000; preferably 400,000 to 800,000; it is water soluble or water dispersible; and forms a clear humidity resistant, hydrophobic film when cast upon a support surface; which is surface active and hydrolytically stable; and is a homogeneous terpolymer.

Cosmetic compositions of advantageous properties including about 0.1 to 10% by weight of the terpolymer can be prepared conveniently in this invention.

Preferably, the homogeneous terpolymers of the invention are made according to the method described by Kou-Chang Liu et al. in U.S. Patent 5,626,836.

EXAMPLE 1

The preparation of (dodecyldimethyl methacryloimidopropyl ammonium tosylate). [DMAPMA-C₁₆Ts] A mixture of 360 g of dodecyl tosylate and 200 g of DMAPMA were slowly heated up to 70°C without a solvent. Stirring was continued at 70°C for 2 hours. Then the reaction was cooled to room temperature and solidified product was further used in polymerization without purification.

EXAMPLE 2

Terpolymer of VP/DMAPMA/DMAPMAA-C12Ts Quat

N-Vinylpyrrolidone (VP) (280 g) and deionized water (1400 g) are charged into a 2-liter resin pot equipped with a gas inlet, liquid inlet, a thermometer, and a condenser. The pH of the solution is adjusted to about 7.5 with KOH. Then a stream of nitrogen is introduced which bubbles through the solution during the reaction. The solution is gradually heated to 65°C for Lupersol® 11 catalyzed reaction, or to 78°C for a Vazo® 67 initiated process. Then, DMAPMA (17.5 g) and DMAPMAA-C₁₂Ts quat (52.5 g) are added continuously and uniformly into the pot with vigorous stirring for 4 hours so that the relative concentrations of the monomeric VP, DMAPMA, and DMAPMAA-C₁₂Ts quat monomer remain practically constant throughout the reaction at predetermined levels.

As soon as DMAPMA and the DMAPMAA-C₁₂Ts quat are introduced into the pot, Lupersol® 11 (t-butylperoxy pivalate in mineral spirits) or Vazo® 67 2,2-azobis(2-methylbutanenitrile), catalyst is added. The rate of the addition of the catalyst is such that 2 ml of Lupersol is completely delivered in 4 hours. Then the solution is held for an additional 3 hours at 68°C (or 78°C for Vazo 67 initiator). The product is an aqueous solution of a homogeneous terpolymer of VP, DMAPMA and a DMAPMAA-C₁₂Ts quat has a predetermined composition indicative of the relative amounts of each monomer used in the process and is substantially free of any residual homopolymer or copolymer. The yield of the terpolymer product is substantially quantitative.
